<b>Patient Name</b>	Nick	<b>Health Status</b>	Acute infection, blood in urine	<b>Sample ID</b>	MI1U9040
<b>Owner's Name</b>	NA	<b>Ordered By</b>	NA	<b>Sample Type</b>	Cysto(urine collection tube)
<b>Gender</b>	M, Neutered	<b>Email</b>	NA	<b>Received Date</b>	8/19/2021
<b>Breed</b>	Labrador Retriever	<b>Hospital</b>	NA	<b>Report Date</b>	9/2/2021
<b>Age</b>	11 yrs	<b>Location</b>	NA		
<b>Species</b>	Canine	<b>Account Number</b>	NA		

## Potential Clinically Relevant Microbes Detected:

Listed are those bacteria and fungi detected in the specimen that are of potential clinical relevance. Results from this report should be considered together with additional clinical data gathered by the veterinarian (physical examination, medical history, cytology, etc.) as the microbes detected may or may not be the cause of the clinical condition. For a comprehensive list of all microorganisms detected in this specimen see page 3 of this report.

### 1. Bacteria

Species Detected	Relative Abundance (%)	Cells per sample
<a href="#">Klebsiella aerogenes/granulomatis/pneumoniae</a> [6]	46.16	76000
<a href="#">Klebsiella aerogenes/pneumoniae</a> [6]	41.60	68000
<a href="#">Klebsiella pneumoniae</a> [6]	5.41	8900
<a href="#">Klebsiella aerogenes</a> [6]	5.26	8600

### 2. Fungi

None Detected

## Microbial Overview:

Charts below depict *Bacteria vs Fungi*: an overview of the microbiome, *Bacteria*: the relative abundance of all clinically relevant species detected relative to the rest of the microbiome for bacteria, and *Fungi*: the relative abundance of all clinically relevant species detected relative to the rest of the microbiome for fungi. Each color represents a different species. The larger the size of the colored segment, the more abundant that specific species is in the specimen. The purpose of these graphs is to highlight if any clinically relevant organism is overgrown in the sample.

## Antibiotic Resistance Panel for Detected Clinically Relevant Microbes

The sample was screened for the presence of antibiotic resistance genes and intrinsic resistances of clinically relevant microorganisms. For this analysis more than 90 antibiotic resistance genes were screened. The **cautious** use of any antibiotic drug is highly recommended. Please follow the guidelines for antimicrobial stewardship in veterinary practice.

Antibiotics	Drug Tiers Follow Guidelines*	Klebsiella aerogenes (45.97%)	Klebsiella pneumoniae (8.61%)	Suggested Dose for All Pathogens**	Drug Delivery
Cefazolin	1st Line Antibiotics for Common Infections.	NR	NR	15 mg/kg, q 12 hrs	IV, SC
Cephalothin		G	F	4-20 mg/kg, q 8 hrs	PO
Cephalexin		NR	NR	22 mg/kg, q 12 hrs	PO
Cefadroxil		NR	NR	22 mg/kg, q 12 hrs	PO
Cefoxitin		G	G	15 mg/kg, q 12 hrs	IV, SC
Penicillin		G	G	8-10 mg/kg, q 8 hrs	PO
Penicillin G		G	G	--	--
Oxacillin		NR	NR	22 mg/kg, q 8 hrs	IV
Ampicillin		NR	NR	22 mg/kg, q 8 hrs	IV, SC
Amoxicillin		NR	NR	22 mg/kg, q 8 hrs	PO
Clavamox		G	G	13.75 mg/kg, q 12 hrs	PO
Gentamicin		G	G	6 mg/kg, q 24 hrs	IV, SC
Tobramycin		G	F	--	IV/Topical Use
Neomycin		G	F	--	Topical Use
Clindamycin		G	G	5.5 mg/kg, q 12 hrs	PO
Lincomycin		G	F	15-25 mg/kg, q 24hrs	PO
Doxycycline		F	F	5 mg/kg, q 12 hrs	PO
Minocycline		G	G	10 mg/kg, q 12 hrs	PO
Tetracycline		P	P	20 mg/kg, q 12 hrs	PO
Sulfonamide		G	G	30 mg/kg, q 12 hrs	PO
Trimethoprim		G	F	15-30 mg/kg, q 24 hrs	PO
Metronidazole		G	G	10 mg/kg, q 8 hrs	IV
Cefovecin	2nd Line Use Caution to Avoid Resistance.	NR	NR	8 mg/kg, once	SC
Cefpodoxime		NR	NR	5 mg/kg, q 24 hrs	PO
Ceftiofur		G	F	2.2 mg/kg, q 24 hrs	SC
Timentin		G	F	--	Topical Use
Azithromycin		NR	NR	5 mg/kg q 12 hrs	PO
Orbifloxacin		G	F	2.5-7.5 mg/kg, q 24 hrs	PO
Chloramphenicol	3rd Line Last Resort Options.	NR	NR	35 mg/kg q 8 hrs	PO
Florfenicol		G	F	20 mg/kg, q 12 hrs	PO
Amikacin		G	G	15 mg/kg, q 24 hrs	IV, SC
Rifampin		NR	NR	5-10 mg/kg, q 12 hrs	PO
Imipenem		G	G	10 or 20 mg/kg, q 8 hrs	--
Levofloxacin**		G	F	10-30 mg/kg, q 24 hrs	IV/PO
Marbofloxacin		G	G	2.75-5.5 mg/kg, q 24 hrs	PO
Pradofloxacin***		F	G	3.0 mg/kg, q 24 hrs	PO
Enrofloxacin		P	G	5 mg/kg, q 24 hrs	PO
Ciprofloxacin***		F	F	--	Topical Use
Nitrofurantoin		F	G	4.4-5mg/kg, q 24 hrs	PO
Colistin**		F	F	8-9g/kg, q 24 hrs	PO
Ceftazidime		NR	NR	3-30 mg/kg, q 6-8 hrs	IV
Mupirocin		F	F	--	Topical Use
Piperacillin		F	G	80-100 mg/kg, 30min q 8 hrs	IV
Ticarcillin		F	F	3.1 g, q4-6 hrs	IV

This table lists antibiotic sensitivities/resistances for the indicated bacteria based on detection of specific antibiotic resistance genes and naturally occurring, or intrinsic, resistance to specific antibiotics previously identified for that organism. To receive a list of the antibiotic resistance genes detected as well as intrinsic resistances for additional organisms not listed here, please contact MiDOG® customer support.

### Abbreviation Key:

NR	Not Recommended (Due to either Intrinsic Resistance, or Resistance Gene Detection, or < 10% Effectiveness in Antibigram Studies)
P	Poor Performance (< 50% Effectiveness in Antibigram Studies)
F	Fair Performance (< 75% Effectiveness in Antibigram Studies)
G	Good Performance (> 75% Effectiveness in Antibigram Studies)
	No Literature Information Available

PO = Oral, By Mouth.

IV = Intravenous Injection. Injections involving direct injection into the vein.

SC = Subcutaneous Injection. The medication delivered to the tissues between the skin and the muscle.

TU = Topical Use

## Supplemental Data on Microbial Composition

### Bacterial Analysis

Charts below depict the relative abundance of all detected bacterial species. Each color represents a different bacterial species. The larger the size of the colored segment, the more abundant that specific species is in the specimen.

The table below lists all bacterial species detected in the specimen within the limit of detection. The absolute and relative abundances of each species is shown.

Species Detected	Relative Abundance (%)	Cells per sample
<a href="#">Klebsiella aerogenes/granulomatis/pneumoniae</a>	46.16	76000
<a href="#">Klebsiella aerogenes/pneumoniae</a>	41.60	68000
<a href="#">Klebsiella pneumoniae</a>	5.41	8900
<a href="#">Klebsiella aerogenes</a>	5.26	8600

### Fungal Analysis

No fungal species detected. Please Note: It is common to see no fungal load in healthy urine samples. For more information see the Methods Section under: 'When no Bacterial or Fungal Species are Detected'

## Method

The MiDOG® All-in-One Microbial Test is a targeted, Next-generation DNA sequencing testing service able to identify molecular signatures unique to the identity and character of a specific microorganism. This test relies on safeguarded preservation and transport of collected samples, thorough extraction of DNA from all microbes present in the specimen, select amplification of microbial DNA followed by Next-generation DNA sequencing using the latest technologies from Illumina (Illumina, Inc., San Diego, CA). Data handling is done via curated microbial databases to accurately align DNA sequences to ensure precise and accurate (species-level) identification of all bacteria and fungi present in the specimen.

### When no Bacterial or Fungal Species are Detected

When no bacterial or fungal species are detected in this test, this result may be due to a very low microbial load and/or low concentration of microbial DNA in the sample provided. In this case, we recommend re-sampling the area of interest and re-submitting specimen for analysis.

## Disclaimer

The information contained in this MiDOG® report is intended only to be factor for use in a diagnosis and treatment regime for the canine patient. As with any diagnosis or treatment regime, you should use clinical discretion with each canine patient based on a complete evaluation of the canine patient, including history, physical presentation and complete laboratory data, including confirmatory tests. All test results should be evaluated in the context of the patients individual clinical presentation. The information in the MiDOG® report has not been evaluated by the FDA.
